## **Learn Data Structures and Algorithms**

The data structure is not any programming language like C, C++, java, etc. It is a set of algorithms that we can use in any programming language to structure the data in the memory. To structure the data in memory, 'n' number of algorithms were proposed, and all these algorithms are known as Abstract data types.

Data structures used in C++ can be classified as follows. A data structure is a way of organizing the data. So we can classify data structures as shown into primitive or standard data structures and non-primitive or user-defined data structures. We have seen all the data types supported in C++. As this is also a way of organizing data, we say ...

Non-primitive data structures are more complicated data structures and are derived from primitive data structures. They emphasize on grouping same or different data items with relationship between each data item. Arrays, lists and files come under this category. Figure 1.1 shows the classification of data structures.
