Managing Data in Motion describes techniques that have been developed for significantly reducing the complexity of managing system interfaces and enabling scalable architectures. Author April Reeve brings over two decades of experience to present a vendor-neutral approach to moving data between computing environments and systems. Readers will learn the techniques, technologies, and best practices for managing the passage of data between computer systems and integrating disparate data together in an enterprise environment. The average enterprise's computing environment is comprised of hundreds to thousands computer systems that have been built, purchased, and acquired over time. The data from these various systems needs to be integrated for reporting and analysis, shared for business transaction processing, and converted from one format to another when old systems are replaced and new systems are acquired. The management of the "data in motion" in organizations is rapidly becoming one of the biggest concerns for business and IT management. Data warehousing and conversion, real-time data integration, and cloud and "big data" applications are just a few of the challenges facing organizations and businesses today. Managing Data in Motion tackles these and other topics in a style easily understood by business and IT managers as well as programmers and architects. Presents a vendor-neutral overview of the different technologies and techniques for moving data between computer systems including the emerging solutions for unstructured as well as structured data types Explains, in non-technical terms, the architecture and components required to perform data integration Describes how to reduce the complexity of managing system interfaces and enable a scalable data architecture that can handle the dimensions of "Big Data"

This issue of Radiologic Clinics of North America focuses on Endocrine Imaging and is edited by Dr. Mark E. Lockhart. Articles will include: Molecular imaging in the head and neck: Diagnosis and therapy; Endocrine imaging: The referring clinician perspective; Thyroid disease in the age of incidental findings; Normal thyroid: US with technical pearls and pitfalls; Thyroid diffuse and nodular disease ultrasound; CT and MRI of thyroid disease; Multimodality imaging of neuroendocrine tumors; Neck, thyroid, and parathyroid imaging procedures; Parathyroid imaging; Neuroimaging of pituitary disease; Adrenal imaging; Neuroendocrine tumors: Imaging of treatment and follow-up; and more!
